FAQ

How should I get started to set up an indoor playground?

Research the concept : Adler offers a variety of indoor attractions, including indoor playground systems, trampoline parks, ninja warrior courses, climbing walls, and more. Familiarize yourself with these options and consider your target age group, location, and theme. Understanding the market and customer demand will help you define the vision for your playground.

Contact Adler' s team: Our experienced designers and consultants will discuss your ideas, site layout, and budget. We can provide guidance on equipment selection, layout design, and revenue potential. Adler can even prepare sample 3D renderings and a preliminary project estimate to help you plan your investment and operations.

Is Adler a manufacturer or a trade company?

Adler is a direct manufacturer of high-quality indoor amusement equipment. We operate our own modern production facility, allowing us to control every step of the manufacturing process and maintain strict quality standards. This factory-direct approach enables us to offer competitive pricing and fast customization. By cutting out middlemen, we ensure consistent product quality and provide exceptional value to our clients.

Can I tour your factory?

Certainly! You are always welcome to visit Adler' s state-of-the-art manufacturing facility. Our factory in Hubei Province, China is equipped with advanced machinery and quality-control processes. On a tour, you can observe our production lines in action—seeing everything from material cutting and molding to final assembly. We look forward to meeting you in person and demonstrating the craftsmanship and care behind our products.

Can I have a customized design for my indoor playground?

Absolutely. Our in-house design team excels at creating fully customized playgrounds. Provide us with your site' s layout, ceiling height, and any themes or activities you want, and we will develop a unique design tailored to your needs. You will receive detailed plans and 3D renderings for your review. Adler' s designers combine creativity and technical expertise to ensure your playground is both innovative and perfectly suited to your space.

Can you offer a full set of services, including design, manufacturing, transportation, and installation?

Yes. Adler provides a complete turnkey solution for your project :

Design & Planning : We create detailed layouts and 3D designs based on your site drawings and requirements.

Manufacturing : All equipment is built in-house in our factory, using high-quality, non-toxic materials and strict quality control.

Logistics : We handle the packing and international shipping process. Our experienced logistics team coordinates with freight forwarders to ensure safe transit and smooth customs clearance.

Installation : We provide comprehensive installation manuals and drawings. If needed, our trained technicians can travel to your site to supervise or perform the assembly and train your staff (installation service incurs an additional fee).

INTERNATIONAL STANDARDS

Adler's equipment is engineered to comply with major international safety standards. We follow or exceed:

ASTM (USA) : including ASTM F2970-15 (trampoline park safety standard) and relevant ASTM standards for playground equipment.

EN 1176 (Europe) : the European Standard for Playground Equipment Safety.

CE and TÜV (Europe) : our products carry CE certification and meet German TÜV safety requirements.

All materials we use are non-toxic and fire-retardant, and we conduct rigorous testing during production. If you have specific safety requirements or need certification for your country, just let us know. Adler will provide the necessary documentation and ensure compliance.

When can I fully recover my investment, and how much profit can I expect?

Indoor playgrounds generally offer a healthy return on investment, but the exact payback period depends on many factors (such as location, ticket pricing, and operating costs). Adler can share case studies and sample financial models from similar projects to help you estimate your own ROI. We encourage you to perform a local market analysis for accurate projections. In many cases, well-managed play centers recoup their investment within a few years thanks to strong, steady demand from families.

I have never imported products from another country. Is the import process a hassle?

At Adler, we provide flexible shipping and logistics support tailored to the terms agreed upon with each client. Depending on the specific trade terms selected, we offer different levels of service to ensure your equipment is delivered safely and efficiently.

Our experienced logistics team will coordinate the export process and provide the necessary documentation to support smooth international delivery. With our global shipping experience, you can trust Adler to handle each step of the process professionally and reliably.

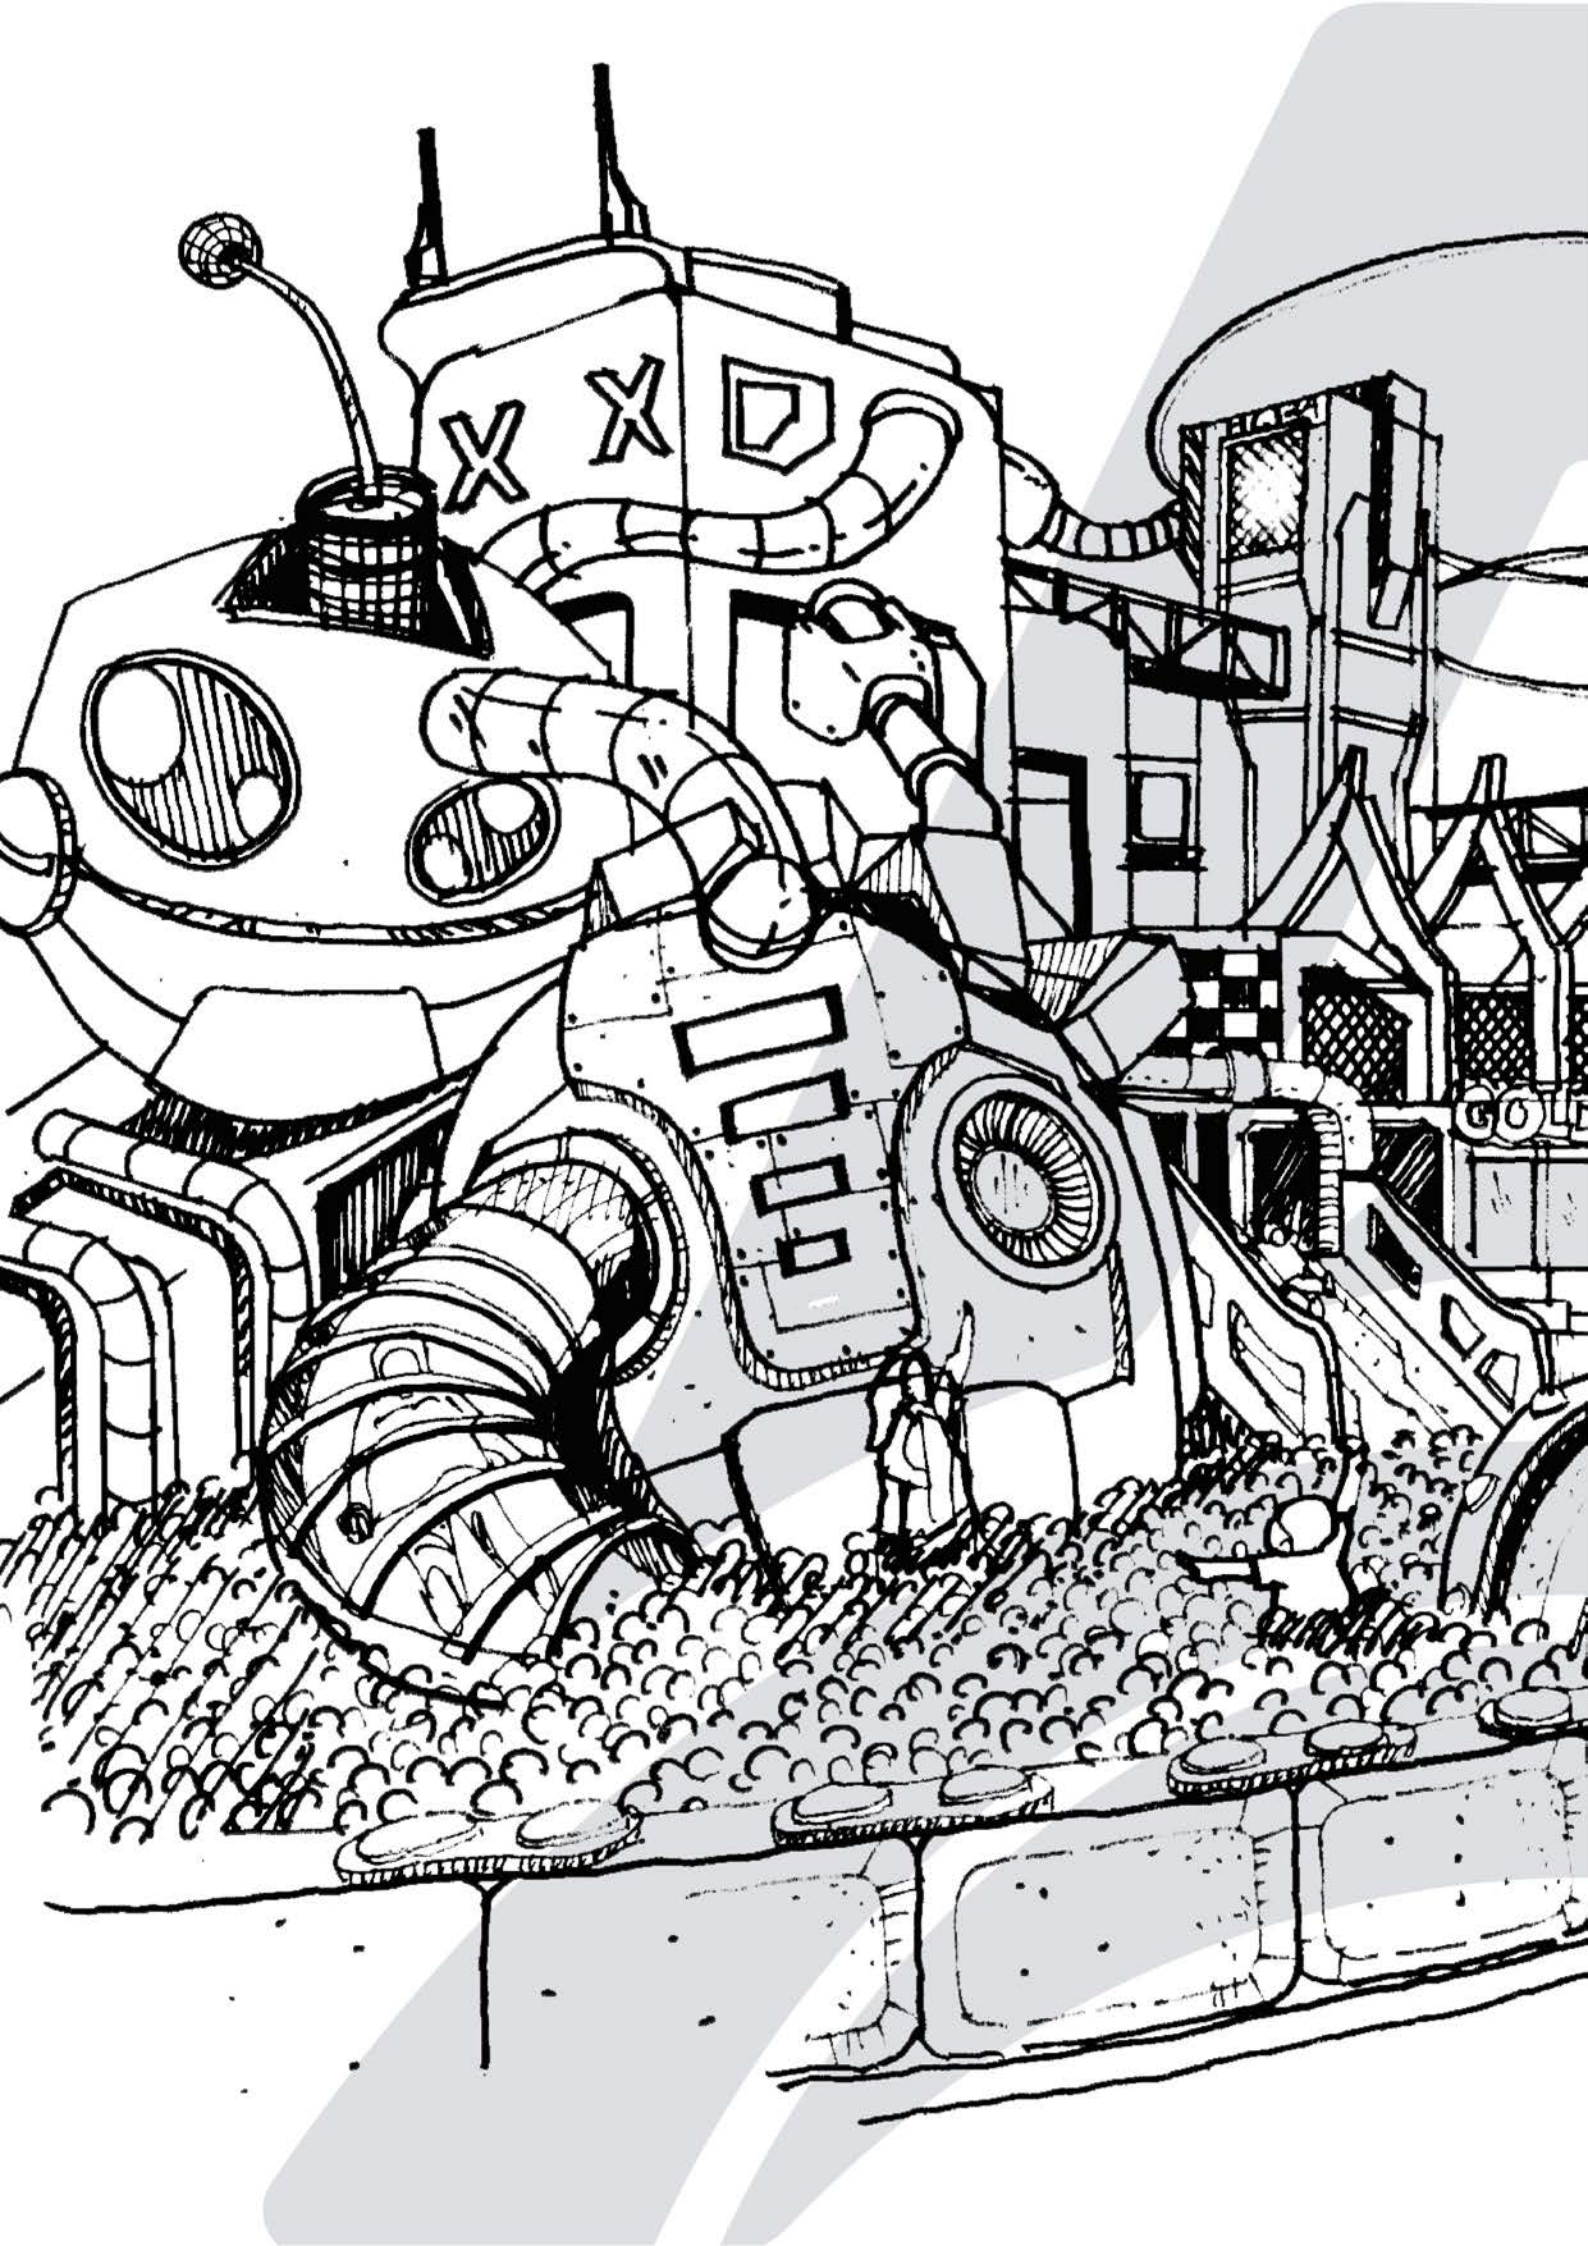

Do you offer any installation service?

Yes. Adler provides support for installation :

Installation Guides : We supply detailed assembly drawings and step-by-step instructions for all equipment.

On-Site Support : If desired, we can send our experienced technicians to your site to supervise or carry out the installation. They will also train your team on proper assembly and equipment operation.

Cost : Professional installation service is optional and incurs an additional fee (depending on project size and location).
